Description:

Using an easy-to-understand writing style, this text integrates immunohematology theory and application to provide you with the knowledge and skills you need to be successful in blood banking. Problem-solving exercises and case studies help you develop a solid understanding of all areas of

blood banking.

- Learning objectives begin each chapter.
2. Illustrated blood group boxes throughout chapter 6, *Other Blood Group Systems*, give the ISBT symbol, number, and the clinical significance of the antibodies at a glance.
 3. Margin notes and definitions in each chapter highlight important material and offer additional explanations.
 4. Chapter summaries recap the most important points of the chapter.
 5. Study questions at the end of each chapter provide an opportunity for review.
 6. Critical thinking exercises with **case studies** help you apply what you have learned in the chapter.
-
- UPDATED! Information and photos on automation include equipment actually used in the lab.
2. Flow charts showing antibody detection and identification help you detect and identify antibodies.
 3. Advanced topics on Transplantation and Cellular Therapy, the HLA System, Molecular Techniques and Applications, Automation, Electronic Crossmatching, and Therapeutic Apheresis make the text relevant for 4-year MLS programs.
